

Suppression & Incompetence poison Australia's economic & equity future

The Prime Minister is telling porkies about

- Not lose time
- Implement renewables
- Work with business
- Implement integrity
- "To change"
- Implement HST
- Hit 2020 target of 43%
- Support Inlands
- Liberate victims

His reality is that the wrecked standards of Turnbull, Morrison & Kennedy are continuing unabated by a "clean break", quite the opposite, their thumbscrew on communities Kennedy is manipulating Treasurer Chalmers mercilessly:

There has to be a real question as to whether Jim Chalmer's glib press appearances are anywhere near appropriate for the hard graft of real reform in Australia.

The PM also has my proposals offered gratis if the stain can be expiated URGENTLY (the accompanying "Kennedy Effect" details the easy and ethical way out of the mess), to turn around the business, climate, covid and regionalisation crises (below).

| No-plan direction at start | Main consequences | Implications |
|---|---|--|
| Not learn from Morrison & Frydenberg Not eliminate cronyism | Make same mistakes Kill ability "to plan" Misallocate resources cf OECD | Cause community anger at failed anti-corruption Fail to meet carbon targets, incur penalty taxes Antagonise central agencies & authorities |
| Make enemies Not recover illegitimate "gifts" Alienate best ideas | Quarantined priority areas e.g. Frydenberg SME stimulus Be stymied at key points Δ | Lose cost-effectiveness with sadly scarce resources Increase debt and waste unnecessarily Be ridiculed for failing to meet key KPIs |
| Break promises Defer to point of denial | Sterilise potential reserve supporters Alienate Labor swingers | Fail to achieve legislative program Lose confidence of Party Room & business/union actors |
| Not re-skill executive Not use DPM&S to improve Public Service | Make same mistakes Kill ability "to plan" Misallocate resources cf OECD | Not use central agencies to improve network effectiveness Ministers make mistakes, threaten tenure |
| Not allocate resources carefully Not implement 360° QA cycles | Make same mistakes Kill ability "to plan" Misallocate resources cf OECD | Lose cost-effectiveness with sadly scarce resources Increase debt and waste unnecessarily Be ridiculed in international forums |
| Not measure & adjust / correct all KPI areas over time | Miss time signals on gaps & opportunities Fail on key KPIs | Lose cost-effectiveness with sadly scarce resources Increase debt and waste unnecessarily Be ridiculed by central authorities & media |

The dominant quasi-defensive mode of the Coalition and now of the Albanese Government is to make promises, deny they said "it", state they achieved "it", or just lock the door against logic, preferencing the public interest vs corporate cronies and suppressing fair claims for redress of ill-doing. The PM cares about the aged but pisses on Forgotten Heroes (my remaining passion in life).

The OECD itself has condemned Australia as "one of the most carbon-intensive OECD countries and one of the few where greenhouse gas emissions (excluding land use change and forestry) have risen in the past decade". It is not hard to see why many around the globe lobbied against Cormann's new appointment, including the British Labour Party.

Frydenberg and Mathias Cormann were confronted with my 2019 version of my Malenomics package which unpeeled three years of their errors but they hid – they cancelled MYEFO, deferred the Budget, deferred Parliament, cancelled 2 weeks of Parliament, and deceived themselves into more "gifting" tranches. "The Emperor has no clothes". That they got further into trouble was no surprise but that they oppose repair of their blunders is catastrophic. Most media are entangled through proprietors' political and commercial connections and they have misinterpreted and ignored a damaging climacteric. These factors were ignored by OECD and IMF in their surveys.

If you look at my correspondence you've wasted 10 weeks

Anthony Albanese @Albo... · 1h
The new Government has experience and purpose, and we won't waste a day in delivering for the Australian people.

@AlboMP Jim has an email he might be desperately wanting to talk to you about

@JEChalmers It is now easy to argue that the budget will be invalid due to suppression of essential elements required at this point in our history, it will be called the Kennedy effect and you can imagine what it's going to do to your reputation

The Intergovernmental Panel on Climate Change is now explicitly pointing to actions such as moving away from the idea of economic progress based solely on GDP growth as we risk extinction calamity - perhaps even rapid, fully completed mass extinction by between 2075 and 2150. 🇺🇸

@AlboMP copyright but offered gratis if you expiate your ethical load

There's a surprising schizophrenic discussion on climate going on here that is not seen in US and UK as examples. The current disarray in infrastructure planning in Aus preven...

An amazing news story virtually ignored by state/corporate media: scientists are pointing to immediate system change actions because emissions must peak this year to avoid catastrophic 1.5°C/2°C of global warming but economic growth means emissions are surging apocalyptically. 🇺🇸

“Integrity” has been defined too narrowly as explained in sydneybetrayals.me. As an ultra-short summary which encompasses a decade and which can be seen to also cover the Albanese government:

1. “Governance” is about making all the parts and systems of a multivariate city work better together
2. The Greater Sydney Movement and UK Localism are about moving incompetent, lazy and corrupted central government agencies out of the way of communities
3. The PM said he would reduce congestion in our cities and that “*there's no place for ideology*”, but
 - a. NSW has no framework for setting goals, budgets and outcome-based Performance Indicators let alone a risk/outcome matrix which allows it and the community to assess financial, engineering, route and other options
 - b. The lack of project integrity raises costs, causes damage to communities, and shows the world a sad sign of Sydney's decline following the Improvement Generation (shown more by Grattan than agencies)
 - c. The motive for the adoption of Metros (which in reality does not increase route coverage or capacity) is real estate speculation with reduced tax and commercial risks
4. There are significant signs that current governance arrangements are not working. This is at the serious end when an un-costed and even unmentionable consequence is the weakening of the operational and financial integrity of the city's main historical asset, the Bradfield-era rail system, without compensating capacity
5. The departures of Nick Greiner from iNSW and Sir Rod Eddington from iA saw both bodies retract from forensic analyses
6. The federal Department of Infrastructure & Regional Development is fused with commercial interests in lobbies, on iA's Board and in politics, and via “clients”, across the country. A “code” will cover them as well as lobbyists

The re-introduction of untainted governance practices will reduce costs, speed the introduction of projects which reduce congestion, improve affordability, and deliver productive community engagement. There is general ignorance of the engineering, economic, environmental, community and intergenerational defects of infrastructure and like contracting programs which reflects the corruption of Eddington, Greiner and general “Treasury Regs” protocols.

We have to step out of this Frydenberg/Kennedy cycle into a Wran/Greiner state of sensible progress which always looked for community benefits, using great people like Peter Francis Cox:

The Coalition and Labor are opposed to “repair” (OECD’s “review”) so the economic challenge of post-carbon reconstruction is impeded by poor measurement, neglected options, failing assets and waste. Albanese underestimates the magnitude of the challenge. This graphic is from May 2020:

Australia has regained some pride in each other after the guilt of 2019 and PM Albanese has shown a surprising degree of compassion and friendship with peers across the world. His firm promise “to change” and to implement Integrity have been met in some areas, in streaks in others and not at all in a few critical areas, namely

- **Integrity past the prospect of a national ICAC into proper management practices from top to bottom, including merit-based appointments, with exceptions punished and corrected fast**
- **respect for citizen rights and community engagement: turn planning around, from back rooms into due diligence a la Eddo and Greiner as in Creative Reconstruction**
- **fast and sympathetic “repair” for the victims of past brutality regardless of their integrity in independent and forthright advice, expiate debt and acknowledge Hero status**
- * **Extinguish traditional NSW vindictiveness - Head Office trait post-Unsworth**
- * **Prosecute political and executive managers who inflict exile, illness & disease on citizens**
- * **Apologise for past climate disregard & coal pretence, stop prosecution of anti-CSG protesters et al**
- * **Take the cases of deaths and disablement seriously and NEVER blame the victim.**

The harsh reality is that local governance was to be a focus of the O’Farrell Coalition’s and of Federal Minister Albanese’s reform moves about a decade ago. The effect was that BOF’s successor Mike Baird wrecked local government so that it is in a greater disarray than a century ago!

Newcastle’s post-carbon recovery was world-class in speed and quality across eight industry sectors plus real estate, with virtually no Federal (Howard/Costello) or State (Carr) financial support. Cost and speed are important in adjusting to technology demands, bringing endogenous parties together as under the later Detroit model. Innovation becomes natural. Morrison/Kennedy’s malenomics was the opposite in logic and quality:

Economics is also about synergy such as between hospital costs and budgets versus the supply of PPPs and clinics in the communities, which improve “community resilience”.

A critical example of suppression is that of the World’s first model for “community resilience” to complement PPEs, vaccines and antivirals, which the Government is trying to ignore but cannot and can only obtain from me.

I offered it gratis subject to expiation of the plagiarism (***in a smooth manner I developed in 2015, then and subsequently suppressed by Kennedy***).

BORDER WARS:

MEDICINE, MANAGEMENT
& *Confusion*

*A Guide to National, state & local governments
in achieving “Health & Economic Continuity”
under Novel Coronavirus*

@AlboMP this is what you are denying the Aus community, world’s 1st system to reduce Covid risk, you are exposed to criticism, I offered it free if you solve plagiarism debt so let’s do it, solve Minister Butler’s dilemma
