

Fact Sheet: Lack of legal legitimacy and failed integrity ruin Intergenerational Equity

The crypto-fascist manner of Bairdijikian was to smash communities and local government to force through corporate corruption such as the Hong Kong Metro's axial densification, thus over-whelming Aussie lifestyles based on terraces and normal suburban blocks. Albanese as Federal Minister did not adequately oppose that and Labor falsely tricked Bill to support it in the 2019 Campaign (as well as the previous year). Turnbull and Morrison took that "Malenomics" to Canberra where Kennedy still pushes it through the "gifting" manner without due diligence protections, with Jim blissfully unaware.

They took that further with deliberate theft of my Intellectual Property to ~

- Force me into homelessness and they hoped towards quick death
- Steal PR camouflage such as my criticisms of Lucy Turnbull's stupid urban policy (she stole my "correct" one) and wallpaper their office with it as part of the corrupt "30-Minute Club" which included iA (which Albanese set up on a pro-corruption path)
- Steal my "public affairs" expertise to dodge and weave through Kennedy's incompetent covid and recovery machinations as described in "COVID AUSTRALIA: FAILURE OF THE MORRISON/ TRUMP/ JOHNSON BRAVURA MODEL" (Kobo)
- Kill the "best idea in 100 years" being the Sydney CBD traffic oasis, circumferential bypass, transit boulevard and Goanna Transit Bridge and two or more expressnets off it, all copyright. Berejiklian was desperate to override Baird and Turnbull over "the most exciting urban redevelopment project in the world" to ratchet-up her failed West Metro which has fallen over (if Perrottet was not so stupid and corrupt to see) Idiot NSW Planning Minister Stokes, Baird's surfing buddy, is proceeding with White Bay without infrastructure which shows how corrupt and incompetent he is.

As OECD also wrote,

The adoption of well-designed fiscal rules, and a reformed budget process that strengthens incentives for prudent long-term planning and provides better information, would help shape budget decisions. ... independent fiscal councils and specific budget tools like the long-term fiscal target ... could be helpful

Innovation Districts and city/states as well as genuine Localism are vital elements in overcoming local barriers to innovation. **Can we trust politicians to overpower their extended chains of internal Party patronage?** – no way. NCCC had been criticised for awarding a whopper PR contract, maybe they should be required to do continuous, clever market surveys of real people at no additional Budget cost, to teach them to not puff up this-or-that mate.

The reality of flexibility, scalability and rapidity will be met through these initiatives, which might well be improved through agency and community engagement.

All without Parliamentary or electoral legitimacy, excused by incompetent and ideological journalists in News, ABC and SMH/Nine.

Genuine Localism is of use in many contexts including a long-term solution to decarbonisation and greyhound racing problems as seen at www.sydneybetrayals.me.

Holding miscreants to account
for demonising Democracy

The National Cabinet was tied to Gaetjen's apron strings from the beginning and minutes have not leaked so we have to assume they failed to address a positive way of the crisis. So in addition to the policy and process improvements outlined in the above download (c), here is an initiative to make national Budget decisionmaking more effective in terms of our national challenges:

- update reports and community-based data series (with ABS etc) which will guide "targetting" - spatial and sector areas needing early intervention vs those doing well (in document)
- a special advisory panel, Stimulus Recovery Monitoring Panel or SRMP, well away from the NCC under Gaetjens and the BCA and Australian Industry Group, representative of SME activities across various sectors, retired but still connected, accountable for probity. In NSW I based monthly reports on +/- exception foci and that will predominate, but action line items will be critical
- a new statutory instrument called MEEFYO or "month end economic and financial outlook", this to get Treasury off its butt and away from its beehive, using the monthly inputs to the full, engaging councils and communities. It will consolidate into MYEFO and the Budgets on the current proper 6/12-month basis
- active auditing by the ANAO and state and territory bodies to reduce waste and ensure probity (better than JobKeeper's).

Kennedy has suppressed this initiative since December 2015 and continues to do so under Queensladah Chalmers:

The National Strategic Re-Planning Template through a \$1.8 billion tbc allocation to iA and acquisition of specific Intellectual Property covering solutions, for public discussion, on

1. Demographic shifts associated with population growth, net migration, economic impacts and financial scenarios, which have changed progressively in the last few years
2. Bushfire precautions including the re-introduction of the Indigenous bushcare management culture through a 10-year risk planning, training and facilities investment program, in full consultation with bushfire communities and local authorities
3. Stimulus initiatives including incentives for electric vehicles, Expressnets to improve local accessibility, the Goanna Transit Bridge as adjusted to serve Darling Harbour's and White Bay's transition, and indigenous women's football
4. Due diligence protocols associated with linking infrastructure economics & effectiveness, methods of financing including reducing loan reliance, re-engineering when needed, and community accessibility as towns and centres evolve
5. Awareness of history associated with previous plague and influenza pandemics and preparations for the next ...
6. A special model of medicine/economics management to reduce the need for local shutdowns and which better prepares communities for resilience strategies with local and state/territory agencies – to be marketed in other countries once readied
7. Community engagement through providing better data for "targetting" and "focussing", placement and operation of fast-response clinics, site readiness through local Standard Operating Procedures applying to routes, centres and pubs/clubs etc.
